HOW EACH ROLE WORKS

TechZephyr campus workflows

One timetable. Cards instead of identifiers. A second person publishes anything that changes the week.

Sign in
Open http://32.236.231.15/login with http, not https. Every demo account uses the password TechZephyr!2026.

The rule that needs two people

Nobody approves their own timetable, repair, or venue request. Reviewer is a second admin so the person who created the proposal is not the person who publishes it. The assistant can draft a request in English or Hinglish. It cannot approve, change priority, or skip the validator.

Master flow: from file to a published week

1	**Admin**	Data. Choose cit_public.json. Press Import dataset. A card appears: 27 rooms, 40 faculty, 189 sessions, 41 exams.
2	**Admin**	Timetable. Click that dataset card. Press Generate timetable. Do not paste an id.
3	**Anyone**	Jobs. Click the new job card. Wait until it says succeeded. Hard conflicts should be 0. The week is still only a proposal.
4	**Reviewer**	Sign in as reviewer@cit.local. Approvals, then Confirm. Tick the box and Approve. The same admin who generated it is refused.
5	**Any role**	Timetable. Click the approved week. Filter by group, faculty, or room. Export schedule.json if needed.

After that week exists, three more flows can run: Spectra venue decisions, a repair, and a manual event. Each one is written out under the role that starts it.

Who can open which screen

A blocked screen says this role cannot open it. The sidebar hides the same links. The API enforces the same limit.

Screen	Admin	Reviewer	Coordinator	Faculty	Club
Workspace	Yes	Yes	Yes	Yes	Yes
Data	Yes	Yes	Yes	Yes	No
Timetable	Yes	Yes	Yes	Yes	Yes
Approvals	Yes	Yes	No	No	No
Venues	Yes	Yes	Yes	Yes	Yes
Changes	Yes	Yes	Yes	Yes	No
Events	Yes	Yes	Yes	No	No
Jobs	Yes	Yes	Yes	Yes	Yes
Profile	Yes	Yes	Yes	Yes	Yes

Admin

CIT Admin admin@cit.local

Imports the dataset, generates the week, and approves someone else’s proposal.

What this person does

1	**Data**	Import cit_public.json, or reset demo data when a clean start is needed. Reset clears schedules and keeps the five accounts.
2	**Timetable**	Click the dataset card and generate. Watch the job. Do not approve this proposal yourself.
3	**Venues**	After a week is approved, click that week and re-evaluate the Spectra requests already in the file. Every result has a reason: approved, alternative, or rejected.
4	**Changes**	Can propose a repair. If this admin created the proposal, a different admin must publish it.
5	**Events**	On an approved week, click a room card, add a title, and validate. A second event in the same room and overlapping time is refused.
6	**Approvals**	Approve a proposal created by the reviewer, a coordinator, or faculty. Never one this account created.

Stops here

Approving their own generated week or their own repair. The message is that you cannot approve your own proposal. The assistant still cannot approve a booking for them.

Reviewer

Second admin reviewer@cit.local

Same screens as admin. The difference is the person, not the role name.

What this person does

1	**Sign in**	Use a second browser or a private window so the admin session stays open.
2	**Approvals**	Open the proposal the first admin generated. Confirm, then Approve. The week becomes the campus week.
3	**Repair**	If faculty or the coordinator proposed a change, this account publishes it. If the reviewer created the repair, admin@cit.local must publish it instead.
4	**Venues**	Can review a venue request submitted by a club, faculty, or the coordinator. Cannot review a request this account submitted.

Why this account exists

Both admin and reviewer have the admin role. The product refuses self-approval even when the second person has the same role. One human using one admin login cannot finish the publish step.

Department coordinator

CSE Coordinator coordinator.cse@cit.local

Department changes, events, and reviews of someone else’s venue request.

What this person does

1	**Data and timetable**	Can import and generate, the same way an admin does. The resulting proposal still needs a different admin to publish.
2	**Changes**	Open Changes, click the approved week, add a faculty leave or a closed room, and press Propose repair. The live week does not move until an admin approves.
3	**Events**	Can add a manual event on an approved week by picking the week card and a room card.
4	**Venues**	Reviews a request submitted by the club or by faculty. The decision and the reason come from the rules. The coordinator does not type a verdict.

Stops here

Approvals and Confirm are blocked. A coordinator cannot publish the weekly timetable. They also cannot review a venue request they submitted themselves.

Faculty

CSE Faculty faculty.cse@cit.local

Reads the week and describes a leave. Does not publish.

What this person does

1	**Timetable**	Open the approved week and filter to their name, a group, or a room.
2	**Changes**	Describe a leave or a closed room against the approved week. Propose repair. Then stop. Jobs shows the proposal. There is no Approve button on this account.
3	**Venues**	Can submit a venue request from the assistant or the manual form. Can read the status and the reason. Can cancel their own request.
4	**Data**	Can see imported datasets. Generating a week is possible, but publishing it is not.

Stops here

Approvals, Confirm, and Events are blocked. Faculty cannot cancel someone else’s venue request. Faculty cannot review a request, including their own.

Club

Club representative club@cit.local

Asks for a room and reads the reason. Does not approve it.

What this person does

1	**Workspace**	The next step points to Venues, not Data. Import and Approve are marked as another role and are not links.
2	**Request**	On the workspace, type a sentence such as: seminar hall kal shaam 6 baje, 2 ghante, 100 log, mic chahiye. Create an editable draft, or use the manual form if the model is off.
3	**Check**	Edit attendance, time, and needs. Choose the approved timetable card. Submit for review. The request stays pending.
4	**Wait**	A coordinator or an admin who did not submit it reviews the request. The result is approved, alternative, or rejected, with a written reason.
5	**Cancel**	The club can cancel its own pending request. Faculty cannot cancel it for them.

Stops here

Data, Approvals, Confirm, Changes, and Events are blocked. A club that asks for an institute event is still treated as a club event. The assistant will not approve the booking.

Three workflows that cross roles

Publish a repair

1	**Faculty or coordinator**	Changes. Click the approved week. Add the leave or the closed room. Propose repair.
2	**Jobs**	Wait until the job succeeds. The week on the timetable has not changed yet.
3	**Other admin**	reviewer@cit.local, or admin@cit.local if they did not create this proposal. Approvals, then Approve.
4	**Result**	As few sessions as possible move. Hard conflicts stay at 0. Export the repaired week if a schedule_after file is needed.

Review a new venue request

1	**Club or faculty**	Draft the request. Submit it against the approved week.
2	**Same person**	Try to review it. This is refused.
3	**Coordinator or other admin**	Venues. Open the request. The rules choose approved, alternative, or rejected, and write the reason.

Decide the requests already in the file

1	**Admin**	Venues. Click the approved timetable. Press Re-evaluate Spectra requests.
2	**Result**	The 25 dataset requests are decided together. A cancelled request is not approved. A held hall comes back as an alternative or a rejection, with a reason.

Cards, not identifiers

Datasets, schedules, jobs, rooms, groups, and faculty are cards. The only things a person types are a title, a time, a file, or a venue sentence. If a screen asks for a UUID, that screen is wrong.

The assistant

The button at the bottom right drafts a room request or a change and can speak the draft back. Asking it to approve the week, raise a priority, or skip the validator is blocked. When no model key is set, the manual form still works.
